MOULDS & DIES

LOOK FOR OPTIMUM SHAPING

COMBINE IT WITH THE RIGHT CONTENT

GET THE MAXIMUM FUNCTIONALITY OF THE PRODUCT

In the production chain from raw materials to finished product, everything matters - the injection molding machines, the periphery and the proper components. But still the mold is responsible for the final result - the accuracy of the product, its functionality and design. Its role is undeniable and deserves special attention, especially nowadays when the range of goods produced needs to be expanded.

That is why RUPLASTICA 2024 launches a die and mould tooling focused exposition for Russian and foreign suppliers, established masters of the industry and new entrants. An extensive business program with the participation of experts with practical experience in tool development and implementation is also expected.

RUPLASTICA 2023 HIGHLIGHTS

25,000
VISITORS

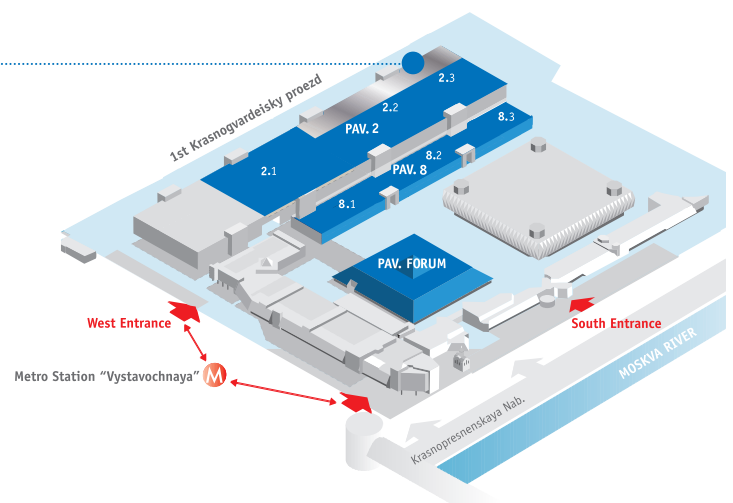

51
EXHIBITORS
Mould
manufacturers & suppliers
